

Managed Service Platform

The multitenant Managed Service Platform of FileCap will definitely add value to the portfolio of a Managed Service Provider (MSP). In combination with the FileCap partner program, this platform allows you to easily provide your customers with a Managed File Transfer solution hosted on your own web server environment.

Simple license management

The platform contains an integrated license management system by which you can roll out or set up a new FileCap portal at any time. FileCap offers you a dynamic and flexible payment model and the possibility to cancel on a monthly basis.

Managed Service Dashboard

The FileCap Managed Service Interface provides you with a simple dashboard to manage your customers.

Private hosted

The FileCap Managed Service Platform can be placed in your own data center or, at the request of the customer, on premise of the customer. This way, you and your customers always know where the data is.

Secure

Advanced encryption methods secure each individual file on a shared storage. Each up- and download is protected.

FileCap: maximum security and optimal ease of use, all in one.

With FileCap you can be sure that your files are only available for the desired recipients. FileCap uses advanced encryption methods to send your files. The sent files are saved individually encrypted on your own FileCap server within your own secured network.

Technical specifications

Thanks to the extensive technical possibilities that FileCap offers, this solution can be used to optimally meet your company's policy and security requirements.
